Description
The remains of two rectilinear buildings are situated on a promontory; a landing place lies adjacent. (i) A house measuring 18m by 5m has walls standing to 2m high. It is internally divided into two chambers. (ii) A shed measuring 5.5m by 4.5m has walls to 1.5m high. It is situated to the seaward side of the house. (iii) In the area between the house and the shed, lie the remains of further probable structures. These survive as low, turf covered foundations. (iv) On the coast edge, to the S side of the structures, two sections of walling protrude into the intertidal zone to form a landing place. One wall is L-shaped, measuring 9m in overall length; opposite it stands the second wall, measuring 3m by 2m in area.

Description						
A group of ruinous buildings, comprising of houses and sheds, are spread out behind the coast edge. These remains lie within the area where at least 5 unroofed structures were previously noted on an AP (GUARD 2006, site 207). The following remains were recorded during fieldwork: (i) A rectangular house measures 12m by 6m; the walls stand to 1.5m high and are 0.8m thick. A small (3m by 3m) extension has been added to the W end. (ii) To the landward side of (i), a shed measuring 7m by 4m has largely collapsed. (iii) A second house lies at NF 84111 47500. This is 12m long and 6m wide; the walls survive to 1.5m high. (iv) A shed measuring 4m by 4m lies to the seaward side of house (iii). Further structures- (v)- (vii) lie inland- these comprise of a shed and two possible houses.

Description						
A ruinous building, the remains of a house, is situated close to an inlet. It measures 11m by 5m and has rounded corners. The walls survive to 1.5m in height. A small enclosure (2m by 2m) has been created inside the NW corner of the building- this may have served as an animal pen (lamb house?) built after the house had already become ruinous. Nearby, on the coast, a rough drystone wall, 3.5m long, forms a landing place within a natural inlet. These remains may be associated with a previously recorded township, most of which is located further inland (GUARD 2006, site 206).

Distance to HWM	Eroding ?	Condition	Threat to Site	Recommendation		
on HWM	n	fair	nil	nil		
Description						
Structural remains have been recorded in this area previously (GUARD 2006, site 191). Fieldwork indicates the following information: (i) A rectangular stone building, measuring 6m by 3m, lies some 50m behind the coast edge. The walls stand up to 1.5m high. It has a single doorway. The interior is filled with rubble. (ii) On the adjacent coast edge, two parallel sections of drystone walling for a landing place some 10m long. (iii) Nearby, a further, fragmentary, wall forms a second probable landing place.

Description						
A range of features situated within the coastal zone are likely to be associated with a known township lying inland (GUARD 2006, site 198). Fieldwork indicates that the following elements are visible on the ground: (i) ruinous enclosures with walls reduced to 0.5m or less, situated over 50m inland; (ii) a 12m long fragment of walling extending along the coast edge, probably forms part of a boundary; (iii) at NF 86109 48138 a horse-shoe shape wall curves around the head of an inlet forming a landing place; (iv) a 38m long wall at NF 86079 48078 follows the coastline, possibly forming a harbour area; (v) a formerly cultivated area, covering some 50m by 30m, lies some 10m to the N of (iv); (vi) at NF 86060 48088 a turf bank running at right angles to the coast can be traced for 50m+ inland. It is 1m wide and 0.75m high; (vii) at NF 85989 48086 a landing place survives as a spread of stone strewn about at the head of an inlet; (viii) formerly cultivated ground, covering an area of some 60m by 80m, lies between (vi) and (vii) and extends down to the coast edge.

Description

A complex of four buildings, a landing place and enclosures are ranged around a small inlet. (i) A habitable but unoccupied house, with a tin roof, lies some 25m behind the coast edge. It measures some 12m by 8m and has an extension built onto the front facade. (ii) Nearby, the footings of a small building (5m by 3m) has walls surviving up to 0.5m high. (iii) W landing place, comprising of a 20m long revetted drystone wall, has been built on the coast edge in front of (i). (iv) An 8m long section of rough walling which projects into the sea from the side of a small inlet forms a landing place or noost. (v) The foundations of a small building (5m by 5m) has walls reduced to 0.5m. It lies at NF 86517 50347 (accuracy 5m), some 15m behind the coast edge. (vi) A ruinous building, latterly used as a sheep enclosure, is located at NF 86523 50319 (accuracy 5m) measures 15m by 6m. (vii) Nearby, an enclosure, measuring 6m by 8m, has walls reduced to less than 1m in height.

Description

Three rectangular drystone walled enclosures lies at the head of an inlet. They have been previously recorded as 'buildings' (GUARD 2006, site 187). Fieldwork indicates the following: (i) One measures 5m by 6m and has rounded external corners. (ii) Another measures 14m by 5m and has walls 1m wide and up to 2m high. (iii) The third enclosure measures 6m by 7m; the walls are reduced in places to 1.5m or less in height.

Description							
One or more landing places are indicated on the coast edge by fragments of drystone walling. Nearby, further fragments of walling in the intertidal zone may represent either landing places or partly submerged field boundaries. (i) A 6m long revetted drystone wall built parallel to the coast edge forms a landing place. It is 2m wide and stands to 1.3m high. (ii) At NF 83175 51065 (accuracy 3m) a wall crosses the head of an inlet and may represent the remains of a landing place. It is 9m long, 2m wide and up to 1m high. Alternatively, it may represent the seaward end of a former fence line. (iii) At NF 83220 51028 (accuracy 7m) a three- sided enclosure located in the intertidal zone may represent a landing place, a fish trap or the seaward end of a former fence line.

Description						
Settlement remains, comprising of a house, outbuildings, enclosures, landing places, cultivation remains and boundary walls, are located between the coast edge and a loch. A township has been recorded previously in this area (GUARD, 2006, site 179). Fieldwork recorded the following: (i)- (iii): At NF 84266 52388 (7m accuracy) a complex comprises of the footings of two rectangular outbuildings, built over the remains of an earlier structure. (i) The earliest of these buildings measures some 12m by 6m; it has walls up to 1.5m wide. (ii) One of the later buildings measures 5m by 4m. The walls stand to 1.75m high and there is an entrance to the E side. (iii) The other of the later buildings measures 4m by 4.5m. The walls stand to 1.6m high and there is a door to the W. (iv) Along the coast edge of the inlet, there are at least three landing places. These are indicated by walls and platforms built out from the coast edge. (v) To the E side of the inlet, occasional traces of former cultivated areas can be seen where the dense heather vegetation has been cleared through recent burning. There are also traces of enclosure walls and field boundaries here. (vi) At NF 84331 52437 (10m accuracy) a 1 and a half story house, now derelict, measures 6m by 12m. It lies some 15m from the coast. (vii) At NF 84383 52311 (accuracy 9m) a shed, measuring 9m by 5m, has walls standing to 1.5m high. (viii) At NF 84368 52344 (7m accuracy) two conjoined sheds have walls standing to 1.75m high. One building measures 5m by 4m; the other measures 2m by 4m.

Description						
Five or more sections of low drystone walling are located within the intertidal zone, extending over an area measuring some 30m by 20m. It is probable that they originally formed a single wall used as a landing place for boats. The walling is slowly degrading due to wave action.

Description						
A roofed but semi-derelict house stands some 40m behind the coast edge. It measures some 12m by 7m, with two small extensions added to the side and front (seaward) facades. It is roofed with asbestos sheeting and the walls are rough harled. The lack of gables, thickness of the walls and their pronounced batter suggests that this is a part-refurbished blackhouse. It is located in the vicinity of a previously recorded township, the rest of which lies inland (GUARD, 2006, site 311).

Description						
Two landing places and three drystone structures are clustered along the coast edge. To the E of the area a landing place (NF 82427 43355, 7m accuracy) is bounded to either side by two walls which project into the sea on the side of a small inlet. On an adjacent promontory there are two small buildings. One measures 3m by 3m, has a single aperture and walls which survive to 0.3m high. The second structure is formed from a section of walling built out from natural outcrop to form a three-sided rough shelter. The third structure (NF 82466 43368, 6m accuracy) lies to the W side of the promontory and measures 4m by 6m. The walls survive to 1.5m high. A second landing place is located on the coast edge nearby. This is defined by a section of walling which projects into the sea for 10m to form a small pier.

Description						
A natural inlet has revetted walling built along its S side to form a landing place. The walling forms a right-angled wharf, measuring 15m by 6m and standing to 1m in height. It is likely that this walling is the same as that noted previously on an AP and interpreted as a possible enclosure (GUARD 2006, site 237).

Description						
Three structures and a landing place are situated in a small valley at the head of a sheltered inlet. At the center of the settlement, a blackhouse measuring 10m by 6m has walls standing to 2m high (probably their full original height). It faces seaward and has a central door flanked by two windows. Inside, the remains of hearths are visible to either end. To the W of this building there is a second structure (5m by 4.5m) which has been maintained into recent times as a shed. The walls stand to 1.2m high and are 1m thick. Gable ends have been added in concrete/cement to support a pitched roof. To the E of the blackhouse there is landing place, equipped with a revetted stone wall (10m X 1m) which forms a wharf. A third building lies close to its head and may be associated. This measures 5m by 4.5m and has a single corner entrance to the landward side.

Description
A blackhouse, together with a shed and a landing place, are clustered close to the coast edge. The blackhouse (12m by 4m) is roofless, with walls standing up to 2m high. The front faces onto the sea; the facade has a central door, flanked by a window to either side. There is also a window in the rear wall and a fireplace to either end of the interior. A shed (6m by 4m) stands to the landward side of the house. The walls are reduced to 0.5m. A landing place is located nearby on the coast edge. Here, a stone wall has been built along one side of a natural inlet, with an associated cleared slipway in the intertidal zone. There are further remains, including field walls and structural remains located inland. These remains have been recorded previously (GUARD, 2006, site 261).

Description
A complex of buildings are clustered close to the coast edge, with a landing place nearby. At the center of the complex, a roofless house (10m by 6m) appears to have been occupied into the mid-20th century. It has been extended, with a porch added to its front facade. The footings of two further buildings lie nearby. One of these, measuring 9m by 5m, contains the remains of an iron 'kettle', possibly associated with cleaning fishing nets and/or sails or boiling tar. The footings are reduced to 1m or less in height and are covered with turf. The other building (4m by 6m) utilises large outcrop boulders within its walls. The landing place comprises of a cleared slipway extending through the intertidal zone to the sea and a concrete pier (3m wide by 15m long).

Description						
The ruins of a rectilinear drystone building, probably a house, are aligned N-S and stand close to the coast edge. The building measures 10m by 6m; the walls stand up to 1.5m high. A concrete sheep dip has been inserted into one end. The ruins of a shed, measuring 4m by 4m, are located nearby; the walls are reduced to 0.5m or less. Traces of former cultivations can be seen to the N side of the house, while there are fragments of boundary walls in the surrounding area.

Description						
A ruinous and roofless blackhouse measures 12m long by 8m wide. The front facade faces inland and has a block and concrete porch attached. The walls are rounded and have render applied externally. Traces of a thatched roof are in evidence. Some window glass and internal timbers survive, suggesting that this structure may have been inhabited into recent times. Nearby, at NF 82469 4449 (7m accuracy) the footings of a rectilinear building, probably a shed, are situated on sloping rough ground. The building is 9m long by 6m wide and is aligned N-S. The walls stand up to 2m high. The house and shed are surrounded by fragmentary field boundaries and greener vegetation, perhaps indicating formerly cultivated areas. The remains of stone revetting on the adjacent coast edge are likely to represent the remains of an associated landing place.

Description

A settlement, comprising of a house and associated features, is located on rough ground behind a rocky shore. (i) A ruinous blackhouse measures 12m by 6m, has rounded ends and no gables and walls up to 1m in thickness. There are chimneys at either end and a facade comprising of central door, flanked to either side by a window. Traces of a shelly render adhere to the interior wall surfaces; (ii) a ruinous boundary wall, NF 82704 43801; (iii) a ruinous enclosure, NF 82713 43834; (iv) and (v) two sheds, measuring 12m by 6m and 8m by 5m respectively, located to the seaward side of the house; (vi) a shed, measuring 5m by 7m, located close to the house; (vii) a landing place, comprising revetted walls built along the coast edge, stands immediately in front of the house. These remains are located in the vicinity of previously recorded site (GUARD, 2006, site 228).

Description

Settlement remains, including a ruinous house, outbuildings, a causeway and cultivation remains are located behind the coast edge. These remains are located in the vicinity of a building noted on an early map (GUARD, 2006, site 242). The following information was recorded during fieldwork: (i) The house, measuring 5m by 10m, is ruinous and roofless. It is aligned N-S. The drystone walls retain some applied render on both internal and external faces; (ii) There are traces of extensive former cultivations located to the NE and S sides of the house; these are now very overgrown; (iii) a shed, measuring 5m by 4m, is located close to the coast edge at NF 85474 40339; (iv) a causeway crosses the junction between the outflow from an inland loch and the mouth of a sea inlet. This drystone construction is 10m long and 1m wide.

Description						
In this area, a series of short sections of rough drystone walling are present on or close to the coast. The larger of these, measuring between 7m and 25m in length, may represent landing places; the shorter sections (typically <5m) may either represent remnant landing places, associated boundaries or perhaps the seaward end of former banks or fence lines, which in these islands tend to be constructed of stone where they lie in or close to water.

Description

A rectangular drystone structure, probably representing either a shed or an enclosure, is situated on low-lying ground behind a rocky coast edge. It measures 10m by 5m; the walls stand to 1.2m high. It is aligned N-S, with an entrance to the W side. A slightly raised stony green platform lies nearby; this may represent the remains of an associated feature. This site may be the same as that noted on an AP (GUARD 2006, site 256).

Description

Two areas of former cultivation are visible on sloping rough ground above a rocky coast edge. (i) At NF 84264 39157 traces of rig and furrow cover an area measuring some 50m by 70m; (ii) at NF 84035 39090 similar remains cover an area measuring some 300m by 200m. This activity may be associated with a settlement located inland (see SU652).

Description						
A settlement, comprising of ruinous houses, outbuildings, enclosures, a landing place and cultivation remains, lies behind the coast edge. A farmstead has been recorded previously in this area (GUARD 2006, site 254). The following information was recorded during fieldwork: (i) At NF 83805 39271, a house, located some 100m from the coast, is now roofless. It measures 6m by 12m, It is mortared and rendered and has external stone steps and a pathway; one step is inscribed with the date '1947'; (ii) a series of rough walls on the coast nearby represent the remains of landing places; (iii) cultivation remains are present within the wider area; (iv) an enclosure, with substantial mortared walls is located at NF 83654 39199. This contains the footings of a concrete building of probable mid-20th C date; (v) a third structure, a ruinous drystone house, lies further inland (ie 100m+ from coast). This measures 10m by 5m. The walls survive to roof height.

Description
The remains of three buildings lie close together, behind the coast edge. These remains are located in the vicinity of buildings noted previously on APs and associated with a recorded township (GUARD, 2006, site 339). The findings of fieldwork indicate the following information: (i) A building measuring 5m by 7m has walls 1m thick and surviving to a maximum of 1.5m high. It contains two doorways, one of which has been blocked. (ii) The footings of two conjoined buildings measure approximately 3m by 6m and 5m by 5m. The walls are reduced to ground level and are 0.8m wide.

Description
Six landing places are defined either by stone clearance or by walling located in the intertidal zone: (i) - (iii) at NF 77957 20251 (accuracy 6m) three landing places lie around the sides of a small inlet. The largest measures 20m long, the others are 10m and 7m long respectively. (iv) At NF 77892 20920 (accuracy 5m) a cleared area or slipway measures 10m long and is 3m wide. (v) At NF 77848 20339 (accuracy 6m) rough walling lines an inlet to form a landing place with platforms or wharves. (vi) At NF 7837 20326 (accuracy 6m) a fragment of rough walling forms a small landing place.
